

Coding & Solution

Date	04 July 2026
Team ID	
Project Name	Rising Waters – Flood Prediction System
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of the implemented code and the overall solution.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/YOUR_USERNAME/Rising-Waters
Programming Language(s)	Python (backend), HTML/CSS/JavaScript (frontend)
Framework(s) Used	Flask, Gunicorn (production server)
Key Features Implemented	10-field prediction form, Joblib model + scaler inference, animated risk gauge result pages, light/dark theme toggle, Render deployment config
Pending / Incomplete Features	Live weather API auto-fill; friendlier validation error messages; automated test suite
Setup / Run Instructions	pip install -r requirements.txt fi python app.py fi open http://127.0.0.1:5000

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Partial
4	Error handling is implemented for critical operations	Partial
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

During development, a routing mismatch (form posting to /predict while the route was registered as /Predict) and an unused duplicate template were identified and fixed. The form was also aligned to read all 10 features expected by the trained model instead of defaulting a subset server-side.
